SUMMARY

Software engineer with 8+ years on the web, deepest in frontend (TypeScript, Vue, Nuxt) and also shipping React, Next.js, .NET, Node.js and Python. I build complex product interfaces and the API, data and release work behind them. At Acelab since 2023, where my role grew from frontend to full-stack in mid-2026; before that, full-stack web roles in Node.js, React, Vue and Angular.

LOOKING FOR Senior product, full-stack or frontend engineering roles · remote · full-time

SKILLS

DEEPEST IN TypeScript, Vue & Nuxt

FRONTEND TypeScript, Vue 3, Nuxt, React, Next.js, Pinia, Tailwind CSS, TipTap

BACKEND & DATA .NET / C#, PostgreSQL, Node.js, Python, Supabase, Fastify, Cloudflare Workers, Hatchet, Hangfire

REAL-TIME & EXTENSIONS Pusher, Supabase Realtime, Chrome Manifest V3, Flutter, Riverpod, Firebase Cloud Messaging

TESTING & SECURITY Playwright, Vitest, Vue Test Utils, NUnit, pytest, Testing Library, JWT, Postgres row-level security

DELIVERY GitHub Actions (PR checks), GitHub Releases, Feature flags, Docker Compose, Vite, Vercel

AI OpenAI API, Claude Code, Codex

WORKING KNOWLEDGE

Technology I've studied and work alongside but haven't owned, listed apart from the tools I ship with.

SHIP AND RUN CI/CD pipeline internals (release-triggered deploys, environments, previews) · Container images for production (multi-stage builds, registries) · Serverless containers (Google Cloud Run) · Kubernetes (deployments, health probes, Kustomize overlays) · Infrastructure as code (Terraform, Gateway API) · Error tracking & tracing (Sentry, OpenTelemetry)

BEHIND THE REQUEST Workflow-engine design (orchestration topology, fan-out, concurrency limits) · MongoDB (document modeling, read caches) · Agentic LLM features (tool calling, MCP, RAG) · Hybrid vector & keyword search (pgvector, BM25, rank fusion)

TRUST AND COLLABORATION Identity & SSO (OIDC, SAML) · CRDT co-editing (Yjs, Durable Objects)

EXPERIENCE

Acelab — Senior Frontend Engineer · Remote from Addis Ababa · May 2023 – present

Material Hub, a materials platform for architects, owners and manufacturers. I joined on the frontend in Vue and Nuxt; in mid-2026 the role grew to full-stack, and I now also write the .NET endpoints, Python workflow steps and Node.js route handlers my features need.

- Led the frontend of a two-sided request-for-information workflow (send wizard, autosaving response grid, live status) and wrote .NET endpoints for its paging, cancellation and live updates.
- Built core parts of the spreadsheet-style product schedule (the save path, cell types, undo and redo, and most of view sharing), built its presence and live cells with teammates, and was a major contributor to the app's Nuxt 3 migration.
- Built the first in-app notification center's interface and live updates; on a teammate's new engine, proposed and built its single real-time event and took its frontend through review to release. Finished and released threaded comments.
- Built two Manifest V3 extensions end to end, one public on the Chrome Web Store, with a scoped token hand-off, server-side LLM parsing and a ground-truth evaluation harness.

- Since mid-2026, carry my features through the server side, inside services teammates built: .NET endpoints with server-side permission checks, Python workflow steps that keep reviewers' edits through a rescrape, Node.js route handlers for an internal review platform, and the migrations behind them.

Mrara Enterprises — Senior Frontend Developer (part-time) · Remote · 2021 – 2024
Vue and Nuxt applications with Vuex and Vue Router, reusable component code, and React front ends with Redux and Tailwind.

Mereb Technologies — Full-Stack Web Developer · Addis Ababa · Sep 2021 – Dec 2021
JavaScript web projects and browser automation tests with Puppeteer.

Tiltek Technologies — Full-Stack Web Developer · Addis Ababa · Jan 2018 – Aug 2021
Web applications in Node.js, React, Vue and Angular, built in an agile team.

360 Ground — Front-End Web Developer · Addis Ababa · Jun 2017 – Jan 2018
Websites for local businesses in React and Vue.

SELECTED PROJECTS

Engineering a workflow that runs between two companies
Frontend lead · Acelab · 2026 · bereket-dev.vercel.app/work/workflow-engineering

Two browser extensions that turn web pages into structured product data
Built end to end · Acelab · 2026 · bereket-dev.vercel.app/work/browser-extensions

Enderase: a marketplace taken from product definition to a working platform
Owner & engineer · Own product · in development · 2026 · bereket-dev.vercel.app/work/enderase
A marketplace where customers book ID-verified providers or pick among bids, confirm with a deposit, message and review, in English or Amharic. In development: a Next.js web app, a Flutter app and a Fastify API on one Postgres backend; payments run in Chapa's sandbox.

A spreadsheet-style data interface and the components behind it
Core contributor · Acelab · 2024–26 · bereket-dev.vercel.app/work/data-interfaces

Keeping every open screen current as shared data changes
Core contributor · Acelab · 2024–26 · bereket-dev.vercel.app/work/realtime-sync

Upgrading a large Vue application, then paying down what came across
Major contributor · Acelab · 2025–26 · bereket-dev.vercel.app/work/modernization

EDUCATION

Addis Ababa University — BSc, Software Engineering · 2014 – 2019
