Bereket Abera

Software engineer · frontend depth, full-stack delivery

ADDIS ABABA, ETHIOPIA · UTC+3 · REMOTE

bereket5042@gmail.com bereket.dev github.com/BereketAbera linkedin.com/in/bereket-abera-629380180

SUMMARY

Software engineer with 8+ years on the web and deep frontend experience in Vue and Nuxt, plus React. I take features from an unclear request to production across every layer they touch: interface, API endpoints, SQL and migrations, background workflows, browser extensions and release. At Acelab since 2023; full-stack since mid-2026 across a .NET 10 API, Python workflows and an internal Next.js review platform.

LOOKING FOR Senior product, full-stack or frontend engineering roles · remote · full-time

SKILLS

DEEPEST IN TypeScript, Vue & Nuxt

FRONTEND TypeScript, Vue 3, Nuxt, Pinia, React, Next.js, Tailwind CSS, TipTap

BACKEND & DATA .NET / C#, PostgreSQL, Python, Node.js, Hatchet, Hangfire, Supabase, Fastify, Cloudflare Workers

REAL-TIME & EXTENSIONS Pusher, Supabase Realtime, Chrome Manifest V3, Flutter, Riverpod, Firebase Cloud Messaging

TESTING & SECURITY Vitest, Vue Test Utils, Playwright, NUnit, pytest, Testing Library, JWT, Postgres row-level security

DELIVERY GitHub Actions (PR checks), GitHub Releases, Feature flags, Docker Compose, Vite, Vercel

AI OpenAI API, Claude Code, Codex

WORKING KNOWLEDGE

Technology my platform runs on that I've studied but haven't owned, listed apart from the tools I ship with.

SHIP AND RUN CI/CD pipeline internals (release-triggered deploys, environments, previews) · Container images for production (multi-stage builds, registries) · Google Cloud Run (the runtime my web and API features ship to) · Kubernetes & Kustomize (the delivery path my worker changes ship through) · Terraform & Gateway API (how the cluster is provisioned and exposed) · Error tracking & tracing (Sentry, OpenTelemetry)

BEHIND THE REQUEST Workflow-engine design (orchestration topology, fan-out, concurrency limits) · MongoDB (document modeling, read caches) · Agentic LLM features (tool calling, MCP, RAG) · Hybrid vector & keyword search (pgvector, BM25, rank fusion)

TRUST AND COLLABORATION Identity & SSO (OIDC, SAML) · CRDT co-editing (Yjs, Durable Objects)

EXPERIENCE

Acelab — Senior Frontend Engineer · Remote from Addis Ababa · May 2023 – present

Material Hub, a materials platform for architects, owners and manufacturers. Frontend in Vue and Nuxt from the start; since mid-2026 I also write server code for my features: .NET API endpoints, Python workflow steps on Hatchet and route handlers in an internal Next.js review platform.

- Led the frontend of a two-sided request-for-information workflow (send wizard, autosaving response grid, live status) and wrote .NET endpoints for its paging, cancellation and live updates.
- Built core parts of the spreadsheet-style product schedule (the save path, three cell types, undo and redo, and most of view sharing), built its presence and live cells with teammates, and was a major contributor to the app's Nuxt 3 migration.
- Built the first in-app notification center's interface and live updates; on a teammate's new engine, proposed and built its single real-time event and took its frontend through review to release. Finished and released threaded comments.
- Built two Manifest V3 extensions end to end, one public on the Chrome Web Store, with a scoped token hand-off, server-side LLM parsing and a ground-truth evaluation harness.
- Shipped across the platform in 2026: about 27 merged .NET API changes, Python workflow steps on Hatchet, 13 Node.js route handlers and migrations with three tools, inside services and pipelines teammates built.

Mrara Enterprises — Senior Frontend Developer (part-time) · Remote · 2021 – 2024
Vue and Nuxt applications with Vuex and Vue Router, reusable component code, and React front ends with Redux and Tailwind.

Mereb Technologies — Full-Stack Web Developer · Addis Ababa · Sep 2021 – Dec 2021
JavaScript web projects and browser automation tests with Puppeteer.

Tiltek Technologies — Full-Stack Web Developer · Addis Ababa · Jan 2018 – Aug 2021
Web applications in Node.js, React, Vue and Angular, built in an agile team.

360 Ground — Front-End Web Developer · Addis Ababa · Jun 2017 – Jan 2018
Websites for local businesses in React and Vue.

SELECTED PROJECTS

Engineering a workflow that runs between two companies
Frontend lead · Acelab · 2026 · bereket.dev/work/workflow-engineering

Enderase: a marketplace taken from product definition to a working platform
Owner & engineer · Own product · in development · 2026 · bereket.dev/work/enderase
A two-sided home-services marketplace for Ethiopia, in development: a Next.js web app, a Flutter app and a Fastify API on one Supabase Postgres backend, in English and Amharic. Built with AI coding agents under my direction; I own the product, architecture, data model, security and verification.

A spreadsheet-style data interface and the components behind it
Core contributor · Acelab · 2024–26 · bereket.dev/work/data-interfaces

Keeping every open screen current as shared data changes
Core contributor · Acelab · 2024–26 · bereket.dev/work/realtime-sync

Two browser extensions that turn web pages into structured product data
Built end to end · Acelab · 2026 · bereket.dev/work/browser-extensions

Upgrading a large Vue application, then paying down what came across
Major contributor · Acelab · 2025–26 · bereket.dev/work/modernization

EDUCATION

Addis Ababa University — BSc, Software Engineering · 2014 – 2019
